Weekly Report: Week 5

Refactoring
Updated the ERD diagram and glossary of terms to reflect the addition of Location, Route, and Passenger entities. Added python data types to the visio model and typed (most of) the attributes. These entities give the system the flexibility to account for user-defined locations, recurring rides, and rides that stop to pick up or drop off passengers along the way. These changes can hopefully be implemented in the code base with the assistance of refactoring tools.
