RoadMate

08

## Installation Instructions

Installation

Step 1: Install Google App Engine

Download Google App Engine from
http://code.google.com/appengine/downloads.html

Step 2: Checkout RoadMate code

Check out a copy of RoadMate from our SVN repository on Google
Code.

- The **latest release** can be checked out from
  /svn/trunk/roadmate/
- For **stable releases** see */svn/tags/*

Step 3: Run RoadMate

You can now test RoadMate with the web server included with the
App Engine SDK.

Start the web server by executing dev_appserver.py, giving it the
path to the RoadMate installation directory. For example, if
RoadMate was installed in google_appengine/roadmate, then you
can start RoadMate by giving the argument:

dev_appserver.py roadmate
