Weekly Report: Week 3

Requirements Document
Creation of a document listing the explicit and implicit, mandatory and additional requirements of the project and prioritizing these to define the scope of the first iteration.
Svn: \docs\Requirement\Requirement List.xls

Use Case Document Consolidation
Consolidating the various use case definition documents into a single document which listed the known use cases, and separating the ones that would be implemented in this first prototype from the others. Also finding out which are referenced from the requirements. Making sure these UC were consistent with the template on WebCT.
Svn: \docs\Use Case\Use Case Descriptions.xls

Entity Relational Diagram
Producing an ERD model of the system and keeping it consistent with the implementation.
Svn: \docs\Domain Model\ERD.vsd

Learning Python and the Google App Engine APIs
So far my involvement with the project has been at a high-level, concerned with the architecture and modeling of the system, and I want to improve my skill with the coding so that I am prepared to become more involved in this part of the project as it becomes more important.
